Petro Waste Opens Two Reclamation Facilities *Convenient Disposal Options in Tilden and Carrizo Springs*

SAN ANTONIO, TX (January 5, 2015) – Petro Waste Environmental (PWE), a San Antonio based company that processes non-hazardous oilfield drilling by-products, announces the grand opening of two state-of-the art, oil reclamation and washout facilities in Tilden and Carrizo Springs. The Tilden facility, located just one mile east of Tilden on Hwy 72, is set to open January 5, 2015, while the Carrizo Springs facility, located at 3592 North FM 1407, will open its doors later in February.

The new PWE facilities process high solids content, E&P waste and provide washout services. PWE's innovative approach to the removal and processing of solids will provide customers with a logistically convenient disposal option capable of processing all forms of non-hazardous E&P waste.

“PWE's services are an integral part of the drilling and production process. Safety is of the utmost importance, so we have taken every precaution in planning and designing the facilities in Tilden and Carrizo Springs,” said George Wommack, CEO of Petro Waste Environmental.

In addition to providing customers with an exceptional disposal facility in Tilden and Carrizo Springs, PWE offers cleaning services for transport containers. Customers may bring their vacuum trucks and transport trailers to be washed out at PWE's facility and they may drop off their frac tanks to be thoroughly cleaned by the PWE staff on a 4-bay truck wash pad.

PWE has positioned itself to become one of the largest, strategically located network of oilfield waste processing and disposal facilities in the country. The company has exclusive access to select Pyote locations serving the Permian Basin and Eagle Ford plays and will continue adding solid waste processing functions to Pyote's ever expanding network of saltwater disposal wells. Building solid waste facilities adjacent to existing saltwater disposal infrastructure creates a one stop shop capable of processing all forms of non-hazardous oil field waste at each of PWE's facilities, making the geographical footprint larger while creating a smaller carbon footprint.

About PWE:

PWE is company that processes non-hazardous oilfield drilling by-products and is dedicated to high standards of safety and compliance. The company is working with the best engineering firms to create state-of-the-art facilities using world-class technology including high-tech automation and monitoring systems, which supplement the functions of onsite personnel. PWE is headquartered in San Antonio, Texas. For more information please contact George Wommack at 210.782.9534
