PETRO WASTE ANNOUNCES OPENING OF TILDEN RECLAMATION FACILITY

Local Company Provides Convenient Disposal Options

SAN ANTONIO, TX (October, 2014) – Petro Waste Environmental (PWE), a San Antonio based company that processes non-hazardous oilfield drilling by-products, announces its state-of-the art, oil reclamation and washout facility, slated to open this fall in Tilden, TX.

Scheduled to be completed in November 2014 and located just one mile east of Tilden on Hwy 72 in McMullen County, the new PWE facility processes high solids content E&P waste and provides washout services. PWE's innovative approach to the removal and processing of solids will provide customers with a logistically convenient disposal option capable of processing all forms of non-hazardous E&P waste.

“PWE's services are an integral part of the drilling and production process during this exciting time in the Texas oil and gas industry. We are investing substantial resources in every aspect of the planning and designing of our facilities, taking every precaution to provide the highest level of safety for all involved,” said George Wommack, CEO of PWE.

In addition to providing customers with an exceptional disposal facility in Tilden, PWE offers cleaning services for transport containers. Customers may bring their vacuum trucks and transport trailers to be washed out at PWE's facility and they may drop off their frac tanks to be thoroughly cleaned by the PWE staff on a 4-bay truck wash pad.

PWE has positioned itself to become one of the largest, strategically located network of oilfield waste processing and disposal facilities in the country. The company has exclusive access to select Pyote locations serving the Permian Basin and Eagle Ford plays and will continue adding solid waste processing functions to Pyote's ever expanding network of saltwater disposal wells. Building solid waste facilities adjacent to existing saltwater disposal infrastructure creates a one stop shop capable of processing all forms of non-hazardous oil field waste at each of PWE's facilities, making the geographical footprint larger while creating a smaller carbon footprint.

PWE is dedicated to high standards of safety and compliance. The company is working with the best engineering firms to create state-of-the-art facilities using world-class technology including high-tech automation and monitoring systems, which supplement the functions of onsite personnel.

About PWE:

PWE headquartered in San Antonio, Texas is a company that processes non-hazardous oilfield drilling by-products. For more information please contact George Wommack at 210.782.9534.
